SUMMARY

Frontend developer and AI systems builder with 3+ years of experience shipping production-grade web products with React, Next.js, and TypeScript. Builds AI-powered developer tools, including CLI assistants, federated search engines, and code generators, using LLMs, RAG pipelines, and modern AI APIs. Smart India Hackathon 2023 runner-up among 200,000+ teams.

TECHNICAL SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript, Vite, Tailwind CSS, HTML5/CSS3, Responsive Design, React Native, Flutter
- **Backend & Data:** Node.js, FastAPI, REST APIs, SSR, JWT Auth
- **AI & ML:** Groq API, LangChain, Hugging Face Transformers, RAG, LoRA/PEFT, Unsloth, TRL, AI Agents
- **SEO, Performance & Infra:** Technical SEO, Core Web Vitals, Vercel, AWS, Cloudflare, Docker, Jenkins, Github Actions, Figma

PROFESSIONAL EXPERIENCE

Raen AI

May 2024 – Present

Frontend Developer

- Own the React and TypeScript/Next.js frontend stack across Raen AI's marketing pages, product interfaces, and internal platforms.
- Drove technical SEO across metadata, semantic hierarchy, and indexing strategy, taking the brand's primary keyword to #1 on Google, and improved Core Web Vitals via load and rendering optimizations.
- Led frontend development of the web portals, application and products, including authentication flows and real-time data interfaces used by clients daily, partnering with designers and PMs on motion design using Framer Motion, GSAP, and Lenis.

Self-employed

2023 – May 2024

Freelance Software Developer

- Delivered end-to-end web/software projects for private businesses and NGOs, managing concurrent client codebases from scoping through handoff, across React/Next.js, REST APIs, and MongoDB.

PROJECTS

Cairn - Federated Dataset, Model, Paper & Code Search Engine

Next.js, TypeScript, SQLite, SSE, Groq

- Built a federated search engine fanning one query out to 8 sources in parallel (Hugging Face, arXiv, GitHub, Kaggle), streaming ranked results live via SSE with a transparent 0–100 reproducibility score and a hand-implemented TF-IDF relevance model.

Tornado - Local-First Torrent Search Client

Node.js 22, TypeScript, Ink + React TUI, WebTorrent

- Built a terminal-native client federating 10+ sources with per-source fault isolation and no account, cloud, or telemetry; includes a download manager with persistent queue, resume support, and SQLite-backed crash recovery.

GitGud - Synthetic GitHub Contribution History Generator

Node.js, Groq API, GitHub REST API

- Built a tool that generates realistic, backdated commit histories and repository structures using Groq-powered LLM inference, publishing them programmatically via the GitHub REST API.

EDUCATION

Asansol Engineering College

2022 – 2026

B.Tech., Computer Science and Engineering — AI & Machine Learning Specialization

ACHIEVEMENTS

- **Smart India Hackathon 2023** — Runner-Up (100,000+ teams)
- **AI Unite Hackathon 2023** — Top 5 nationally, Master's scholarship; **Hardware Model Making 2024** — Winner, plus 10+ more competition wins
- Led an open-source student developer community for 3+ years
